

HELP STOP THE SPREAD OF INVASIVE PESTS & DISEASES.

Our forests are threatened by nonnative insects and diseases that can kill large numbers of trees. Goldspotted oak borer, Sudden Oak Death, pitch canker, Emerald ash borer, Asian longhorned beetle can be transported long distances in firewood. Once transported into new areas, these insects and diseases can become established and kill local trees.

HOW YOU CAN HELP:

- Leave firewood at home - do not transport it to campgrounds or parks.
- Use firewood from local sources.
- Burn all firewood before leaving your campsite if leaving the local area.

BUY IT WHERE YOU BURN IT.
