This is the first pest update for the 2012 season. Following tradition, our first update gives you a historical look at the first biofix for each insect. Biofixes indicate the date when these insects are consistently caught in traps.

Pest updates and orchard information can also be found at [ceteama.ucdavis.edu](http://ceteama.ucdavis.edu) click on orchard crops then click on insect updates.

We also have Codling Moth traps up in case we catch as early as 3/24.
