Codling moth Degree Days for Tehama walnut are currently at 608, about time for the start of the “1B”. CM trap catches remain low in this orchard so no “1B” activity at this location yet. Every orchard is different so monitor each location for trap activity.

We are still finding NOW eggs on traps in almond. Will keep you posted on the second biofix for NOW

Additional Pest management information plus twilight temperatures are available at the UC IPM website including a day degree calculator. <http://www.ipm.ucdavis.edu>.
