

## POULTRY

• To have chickens you need a chicken coop. A chicken coop needs to protect your chickens from predators, keep them warm and dry, give them a place to nest, and give them a place to roost. In my poultry project I learned how to make a chicken coop. Here are several important steps.

Then, you build the floors.

After that, you build the walls.

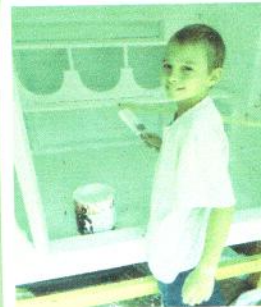

• First you have to purchase materials.

• You nail the walls to the floor and it is now starting to look like a chicken coop!

• Next you do some measuring.

• Finally, you paint the chicken coop.
