Squash: summer & winter		X	X
Sunchoke tubers	X		April
Sunflowers		X	X
Tomatoes		X	Varieties for cooler climates
Turnips	X		X

NOTE:

Planting months are preferred planting dates, not absolutes.

Planting/growing season may be extended with row covers to protect from frost or with shading mechanisms to protect from heat.

Plants grow more slowly when temps are cool and most plants shut down photosynthesis when air temperature is over 92° F
