## Report Summary

Powdery mildew is caused by the biotrophic fungus *Erysiphe necator*<sup>1</sup>; this polycyclic disease of grape causes losses to crop quality and yield and is considered one of the most economically important diseases of grapes worldwide. This report details the findings of our annual powdery mildew fungicide trials on grapevine (*Vitis vinifera*, Cultivar Chenin Blanc – 12- yrs-old). Along with Chardonnay, Muscat Blanc, Roussanne and Carignane, Chenin Blanc is one of the highly susceptible wine varieties<sup>2</sup>. This trial was conducted at the University of California Davis Plant Pathology Fieldhouse Facility (38.522591, -121.760719) from May to July 2023. Treatments were applied to run-off using a mist blower backpack sprayer (Stihl SR 430). Treatments were performed in a complete randomized block design with five replicates of two vines each. Trial I consisted of synthetic fungicides and combinations of soft chemistry and synthetic products. Trial II consisted of soft chemistry products, including biologicals, sulfurs, nutrient applications, oils, and other organic materials. Spray frequencies varied from 7-day to 21-day intervals. Spraying was completed on July 13<sup>th</sup> based on the berry brix level and treatments were evaluated for disease incidence and severity on July 25<sup>th</sup>, 2023.

## Materials and Methods

### A. Experimental design

**Table 1. Experimental design**

Experimental design	Randomized complete block design with 5 replicates		
Experimental unit	2 adjacent vines = 1 plot		
Row and tree spacing	11 ft (row) and 7 ft (vine)	Plot unit area	154 ft <sup>2</sup>
Area/treatment	770 ft <sup>2</sup> or 0.0177 acre/treatment (5 replicates = 1 treatment)		
Volume water/Acre	50 gallons = 0.88 gal/5 reps 100 gallons (mid May,) = 1.77 gal/5 reps 150 gallons (early June ) = 2.65 gal/5 reps		
Equipment	Stihl SR 430 mist blower backpack sprayers		

### B. Experimental treatments

The treatments described in this report were conducted for experimental purposes only and crops treated in a similar manner may not be suitable for commercial or other use.

## D. Vine Management

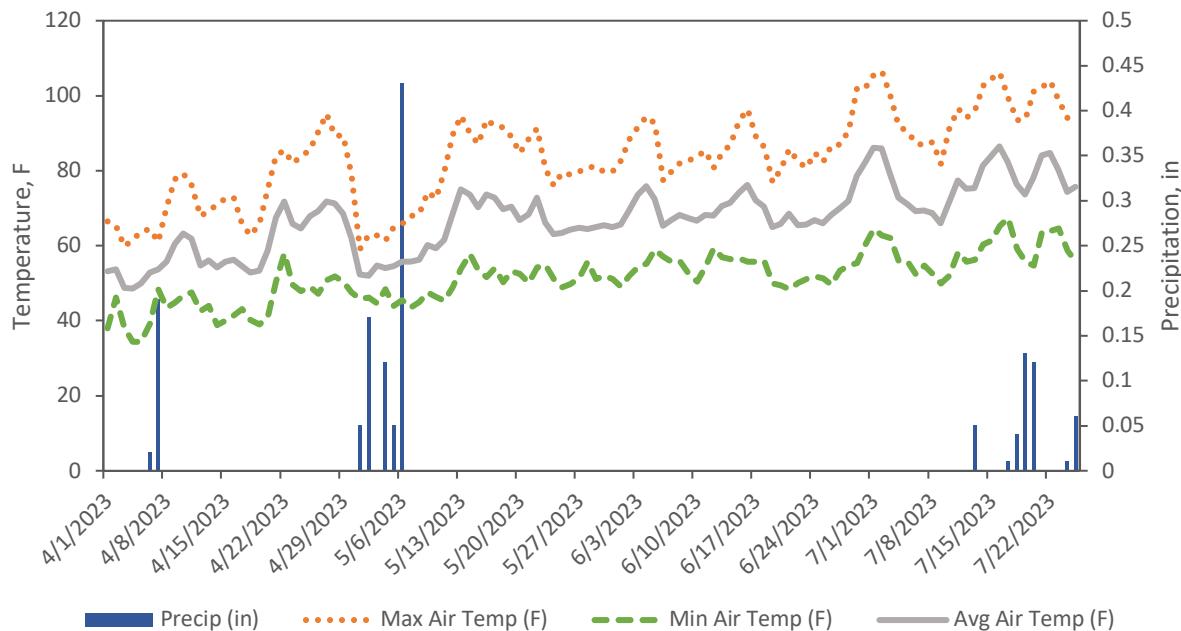

During the application period, vines were irrigated by drip and sprinkler irrigation. Sucker shoot removal and leafing were done on July 20<sup>st</sup>.

## E. Data Collection and Statistics

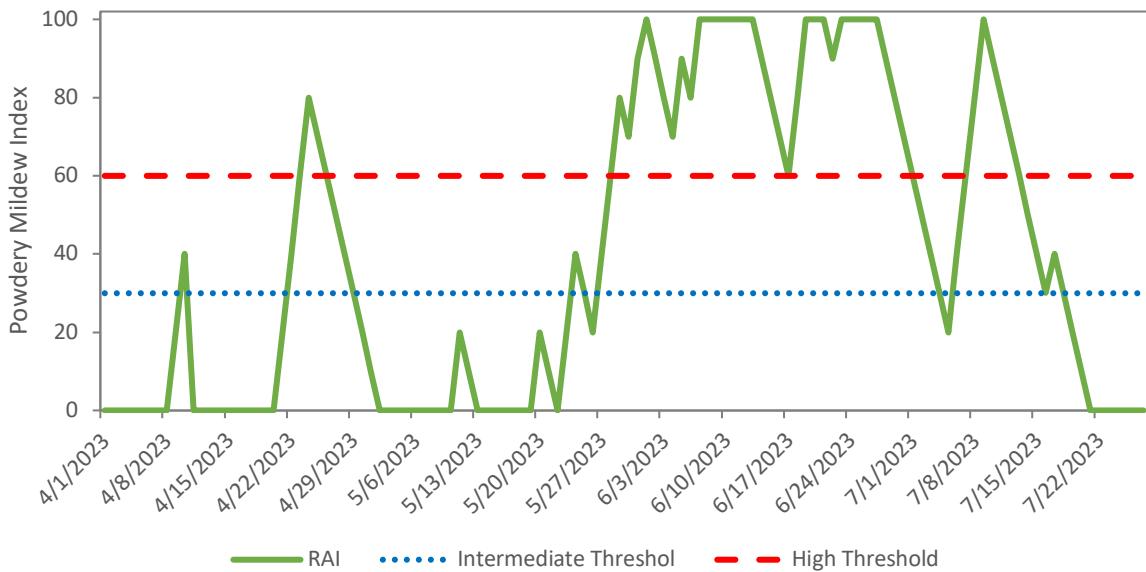

Daily temperature and precipitation were obtained from a CIMIS weather station number 226. The data is shown in Figure 1. Thomas-Gubler Risk Index data was obtained from IPM.UCANR (Figure 2).

Signs of powdery mildew were observed at the beginning of June on berries.

Powdery mildew incidence and severity were assessed in each treatment by evaluating twenty-five random clusters. **Incidence** was defined as the proportion of clusters in a plot having some symptoms and/or signs of powdery mildew. **Severity** was determined by estimating the percentage of area of a cluster that was infected; the severity value of all clusters was then averaged to give a plot-wide estimate of disease severity. Mean incidence and severity values for each treatment were computed. Trial models were analyzed using the ANOVA Tests for data. Means comparisons were made using Fisher's LSD with  $\alpha=0.05$ .

**Figure 1.** Average daily temperature (°C) and precipitation (mm) from Apr 1 to July 25, 2023, from CIMIS station #226.

**Figure 2.** Thomas-Gubler Risk Index data from April 1 to July 27. The Red line data points indicate risk index > 60, between blue and red data points indicate risk index data between 30 and 60 and blue data points are values below 30.

#### F. Pictures of Treatments

Pictures of each treatment can be reached by clicking on the active link on each trial number in the result tables.

#### G. Results

##### Trial I

**Table 1.** Disease incidence and severity of **synthetic fungicides** and combinations of soft chemistry and synthetic products. Product names are followed by rate (per acre). Treatment means followed by the same letter are not significantly different according to Fisher's LSD at  $\alpha=0.05$ .

Elite	Tebuconazole (45%)	Bayer Crop Science	DMI (3)
Endura	boscalid	BASF	SDHI (7)
Fitor	proprietary	Innaco	N/A
FunThyme	proprietary	Agrospheres	N/A
Gatten	flutianil	Nichino America	thiazolidine (U13)
HML Silco	proprietary	Belchim Crop Protection	N/A
HML32	proprietary	Belchim Crop Protection	N/A
Hydrogen peroxide 30%	Hydrogen peroxide	N/A	N/A
Inspire Super	difenconazole (8.4%), cyprodinil (24.1%)	Syngenta Crop Protection, Inc.	DMI-triazole (3)/AP(9)
JMS Stylet-oil	paraffinic oil	JMS Flower Farms	mineral oil (NC)
Kaligreen	Potassium bicarbonate (81.9%)	OAT Agrio Co	NC
Kenja 400SC	isofetamid	Summit Agro USA	SDHI (7)
Kinetic	polyoxyethylene-polyoxypropylene copolymer, polyether modified (99%) heptamethyltrisiloxane	Helena Agri-Enterprises, LLC	adjuvant
Kobber	Proprietary	Belchim Crop Protection	N/A

Luna Experience	fluopyram (17.54%), tebuconazole (17.54%)	Bayer CropScience	SDHI (7)/DMI-triazole (3)
Luna Sensation	trifloxystrobin (21.4%), fluopyram (21.4%)	Bayer CropScience	QoI (11) / SDHI (7)
Merivon	pyraclostrobin (21.26%), fluxapyroxad (21.26%)	BASF	QoI (11) / SDHI (7)
Mevalone	Thymol (6.42%), Geraniol (6.42%), Eugenol (3.21%)	Sipcam Agro USA	BM (1)
Milagrum Plus (OR-488)	Bacillus subtilis strain IAB/BS03 0.30%	Oro-Agri	N/A
Miravis Prime	fludioxonil (21.4%), pydiflumetofen (12.8%)	Syngenta	phenylpyroles (12) / SDHI (7)
Ninja	Proprietary	Sepro	N/A
Nordox	Cuprous oxide Cu <sub>2</sub> O (83.9%)	Nordox Industries	
NSA	Proprietary	Belchim Crop Protection	N/A
NSTKI-037	Proprietary	Novasource	N/A
Oroboost (OR-097-A)	Alcohol Ethoxylate 13.58%	Oro-Agri	N/A
Parade	Pyraziflumid	Nichino America	SDHI(7)
PerCarb	Sodium Carbonate Peroxyhydrate (85%)	BioSafe Systems	N/A
Phosful	proprietary	Innaco	N/A
Potum	proprietary	Belchim Crop Protection	N/A
Pristine	pyraclostrobin (12.8%), boscalid (25.2%)	BASF	QoI(11)/SDHI (7)
Prolivo	pyriofenone	Summit Agro USA	benzoylpypyridine (50)
PureSpray Green	mineral oil (98%)	Intelligro	mineral oil (NC)
Quintec	quinoxyfen (22.6%)	Dow AgroSciences LLC	aryloxyquinoline (13)
Rally	myclobutanil (40%)	Dow AgroSciences LLC	DMI-triazole (3)
Regev (MD5504)	Tea Tree Oil (40.6%) Difenoconazole (20.3%)	Summit Agro USA	DMI-triazole (3) / BM 01
Rhyme	flutriafol (22.7 %)	FMC Corporation	DMI-triazole (3)
SA-0650004	proprietary	Sipcam Agro	N/A
Saponel	Proprietary	Belchim Crop Protection	N/A
Serenade ASO	<i>Bacillus subtilis</i> qst 713 (26%)	Bayer CropScience	microbial (44, NC)
Serifel	<i>Bacillus amyloliquefaciens</i> , strain MBI 600	BASF Corporation	microbial (44)
Shielder (OR-536)	Bacillus subtilis strain IAB/BS03 0.01%	Oro-Agri	N/A
Sonata	<i>Bacillus pumilis</i> strain QST 2808	Bayer CropScience	microbial (44, NC)
Sulfur Dry flowable	sulfur (80%)	Wilbur-Ellis	inorganic (M2)
Syl-Coat	polyether-polymethylsiloxane-	Wilbur-Ellis	adjuvant

	copolymer and polyether-100%		
Theia	<i>Bacillus subtilis</i> strain AFS032321	Agbiome	BM (2)
Thymic (OR-491)	Thyme Oil 10%	Oro-Agri	N/A
Thymic (OR-491-B)	Thyme Oil 10%	Oro-Agri	N/A
Torino	cyflufenamid (10%)	Gowan Co.	phenyl-acetamide (U06)
Trojan	Tetraconazole (13.8%)	Sipcam Agro	DMI-triazole (3)
V6M-5-7	proprietary	Corteva	N/A
Vivando	metrafenone (25.2%)	BASF	benzophenone (50)
X7N68-R009	proprietary	FMC Corporation	N/A

## I. Appendix: Julian Date Calendar for Year 2023
